CRITERIA FOR SEVERE AND PERSISTENT MENTAL ILLNESS AMONG ADULTS

To be considered an adult with severe and persistent mental illness "A" must be met, in addition "B", "C", or "D" must be met.

A. Designated Mental Illness Diagnosis

The individual is 18 years of age or older and currently meets the criteria for a DSM-III-R psychiatric diagnosis other than alcohol or drug disorders (291.xx, 292.xx, 303.xx, 305.xx), organic brain syndromes (290.xx, 293.xx, 294.xx, 310.xx), developmental disabilities (299.xx, 315.xx, 317.xx, 319.xx), or social conditions (Vxx.xx). ICD-9-CM categories and codes that do not have an equivalent in DSM-III-R are also not included as designated diagnoses.

AND**B. SSI or SSD enrollment due to Mental Illness**

The individual is currently enrolled in SSI or SSD due to a designated mental illness

OR**C. Extended Impairment in Functioning due to Mental Illness**

A. The individual has experienced (2) of the following (4) functional limitations due to a designated mental illness over the past 12 months on a continuous or intermittent basis:

B. Marked difficulties in self-care (personal hygiene; diet; clothing; avoiding injuries; securing health care; or complying with medical advice).

C. Marked restrictions of activities of daily living (maintaining a residence; using transportation; day-to-day money management; accessing community supports).

D. Marked difficulties in maintaining social functioning (establishing and maintaining social relationships; interpersonal interactions with primary partner, children, or other family members, friends, neighbors; social skills; compliance with social norms; appropriate use of leisure time).

E. Frequent deficiencies of concentration, persistence or pace resulting in failure to complete tasks in a timely manner in work, home, or school settings (ability to complete tasks commonly found in work settings or in structured activities that take place in home or school settings; individuals may exhibit limitations in these areas when they repeatedly are unable to complete simple tasks within an established time period, make frequent errors in tasks, or require assistance in the completion of tasks).

D. Reliance on Psychiatric Treatment, Rehabilitation, and Supports

A documented history shows individual, at some prior time, met the threshold for C above, but symptoms and/or functioning problems are currently attenuated by medication or psychiatric rehabilitation and supports. Medication refers to psychotropic medications which may control certain primary manifestations of mental disorder, e.g. hallucinations, but may or may not affect functional limitations imposed by the mental disorder. Psychiatric rehabilitation and supports refer to highly structured and supportive settings which may greatly reduce the demands placed on the individual and, thereby, minimize overt symptoms and signs of the underlying mental disorder.
